

# Mast

- <http://proutils.rubyforge.org>
- <http://proutils.rubyforge.org/mast>

## DESCRIPTION

Mast is a commandline utility for generating MANIFEST lists and optionally checksums. It can be useful in conjunction with packaging tools (such as Box), or as a stand-alone tool for monitoring file changes.

## FEATURES/ISSUES

- Self-referential header makes updating manifests easy.
- Checksum lists can highlight changes to current files.

## RELEASE NOTES

Please see RELEASE file.

## SYNOPSIS

Usage is fairly straight forward.

```
$ mast */
```

## HOW TO INSTALL

To install with RubyGems simply open a console and type:

```
gem install mast
```

Local installation requires Setup.rb (gem install setup), then download the tarball package and type:

```
tar -xvzf mast-1.0.0.tgz cd mast-1.0.0.tgz sudo setup.rb all
```

Windows users use 'ruby setup.rb all'.
